

PULSE™ SMART ACCESSORY

# LOAD TRANSFERS MADE SMARTER

Introducing PULSE, Scale-Tec's new smart accessory that autonomously detects when you start and stop a load transfer from your grain cart to a truck. PULSE connects with your POINT® scale indicator to automatically sync your harvest weight data with your REAP account in near real time.

Contact your local Scale-Tec dealer or visit [www.scale-tec.com](http://www.scale-tec.com) for more information.

## DISCOVER THE PULSE™ DIFFERENCE

### ADVANCED TECHNOLOGY

The Vibration Response Technology™ of PULSE was developed using artificial intelligence with a machine learning core to optimize responses to vibration. This enables PULSE to autonomously detect when grain is being unloaded from the grain cart.

### FAST INSTALLATION

Get going in less than 5 minutes. Simply insert batteries, pair with POINT using Bluetooth® wireless technology, and magnetically mount to your grain cart.

### EASY TO MAINTAIN

Battery life lasts an entire harvest season.\* No special batteries are required for PULSE, and replacements can be found at most retail stores.

*\* Battery life is approximate assuming normal use.*

### LOCATION ACCURACY

Includes a GPS antenna, which is required for use. This connects with your POINT indicator to enhance the location features and pinpoint accuracy of REAP.
